## Cladding

Cladding, the external covering of a building including its walls and windows, is of critical importance in the overall integrity and appearance of a building. Now, with this volume, leading engineers and architects from around the world offer the most up-to-date and comprehensive information available on the major types of cladding systems, including masonry, steel and other metals, and glass. Specific topics include: guidelines for making cost-effective, performance-based selections of the right cladding system and materials for a particular building; examination of advanced materials, such as "smart glass" and ultra lightweight stone veneer systems; the newest technologies for faster construction installation; and the latest safety and building code regulations. Providing both an architectural and engineering perspective, Cladding is an essential tool for all professionals.
