Commodity System Approach: An Application in Potato Crop: A Study in U.S.Nagar District of Urttarakhand, India Ajay Kumar Singh, P.N. Singh

The Indian Himalayan Region is divided into North-Eastern and North-Western Himalayan Region that includes 11 states out of which 3 states exist in North-Western Region. Uttarakhand is one of the 3 states embraced by North-Western Himalayan Region. U.S.Nagar is one of the promising district for production of potatoes in the state. The study was about the projection of optimum and present potato commodity system. The existing potato system reveals that the farmers has highly diversified cropping pattern while the optimum plan developed reveals that there were ample scopes of increasing farm income through optimal allocation of resources. The per cent increase in net farm family income of a potato producer over existing income situation was more in improved market situation. The recommended policies are strengthened of extension services, market support and input supply system through mobile teams and declaration of price support for the crop by the government. Further, implementation of Mandi Act, organization of farmers cooperatives and self help groups, etc are other suggestions that might help farmers.
