This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1918 edition. Excerpt: ...(1) that isolated epidermal fibrils are generally of finer diameter than the chondriokonts; (2) that the division of other fibrillar formations such as myofibrils and neurofibrils is admitted by most authors. Duesberg's observations on the epidermis of the tadpole lead him to the same conclusion that the epidermal fibrils arise by the transformation of mitochondria (1912, p. 796). Since the iron-hematoxylin method and the Benda method color the mitochondria and the completely formed fibrils (two very different structures microchemically) alike, these methods of technique can not be regarded as suitable for an investigation of this nature. More specific methods must of necessity be employed. It follows that Firket, in his series showing a parallelism between the disappearance of mitochondria and the formation of fibrils, has had to rely solely upon the diameter of the filaments to determine whether they are mitochondria or differentiated fibrils. His position is therefore insecure, since he can not distinguish with certainty the structures between which he claims to show transitions. If we admit that this parallelism does exist, we find that it is capable of a similar explanation to that advanced in the discussion of collagenic fibrils and myofibrils, namely, that the amount of mitochondria is diminished because the activity of the cells is lessened in the later stages of cytomorphosis. The problem is rendered more difficult and deceiving because of the superficial resemblance which obtains between the staining reactions of the mitochondria and of the fibrils. Some of the fundamental differences which are said to exist between them may be indicated: Mitochondria. Fibrils. 1. Granules, rods, filaments. Long threads of finer diameter...

### **From reader reviews:**

#### **Michael Hamlin:**

Reading a reserve tends to be new life style within this era globalization. With reading through you can get a lot of information which will give you benefit in your life. Using book everyone in this world could share their idea. Guides can also inspire a lot of people. A great deal of author can inspire their particular reader with their story or perhaps their experience. Not only the storyline that share in the textbooks. But also they write about the knowledge about something that you need example of this. How to get the good score toefl, or how to teach your sons or daughters, there are many kinds of book that you can get now. The authors these days always try to improve their skill in writing, they also doing some exploration before they write to the book. One of them is this Contributions to embryology Volume Ñ. 8.

#### **Gary Tawney:**

With this era which is the greater individual or who has ability in doing something more are more treasured than other. Do you want to become one among it? It is just simple approach to have that. What you must do is just spending your time not very much but quite enough to get a look at some books. On the list of books in the top checklist in your reading list is usually Contributions to embryology Volume Ñ. 8. This book which is qualified as The Hungry Inclines can get you closer in turning into precious person. By looking upward and review this reserve you can get many advantages.

#### **Tina McKinney:**

That publication can make you to feel relax. This kind of book Contributions to embryology Volume Ñ. 8 was bright colored and of course has pictures on the website. As we know that book Contributions to embryology Volume Ñ. 8 has many kinds or type. Start from kids until young adults. For example Naruto or Investigation company Conan you can read and feel that you are the character on there. So , not at all of book tend to be make you bored, any it offers you feel happy, fun and chill out. Try to choose the best book in your case and try to like reading that.

#### **Olive Griffin:**

What is your hobby? Have you heard which question when you got pupils? We believe that that question was given by teacher to the students. Many kinds of hobby, All people has different hobby. And also you know that little person like reading or as looking at become their hobby. You should know that reading is very important and book as to be the point. Book is important thing to add you knowledge, except your own teacher or lecturer. You will find good news or update concerning something by book. Different categories of books that can you choose to use be your object. One of them is niagra Contributions to embryology Volume Ñ. 8.
