Non-Invasive Ventilation, An Issue of Clinics in Perinatology, 1e (The Clinics: Internal Medicine)

Bradley Yoder MD, Haresh Kirpalani BM FRCP(Lond) MSc

Preterm birth interrupts the normal developmental progression of most organs, particularly when birth occurs at the lowest level of viability. An immediate task is to successfully transition to a post-natal life without a placental circulation. To do this demands careful management of the cardiorespiratory systems. To best help the fragile preterm infant at this demanding time, care-givers must remember two most pressing goals. These are first to maintain adequacy of gas exchange and delivery, while simultaneously minimizing any secondary injury to the fragile preterm lung. However, after these immediate priorities in the delivery room, the longer term effects of an immature lung development and its associated problems come to the forefront. These problems include the inflammation of perinatal infection, oxygen, and invasive mechanical ventilation. Both the immaturity itself, and secondary lung injury and its inflammation – collectively will often lead to the condition termed bronchopulmonary dysplasia (BPD). Although many of these infants may eventually be discharged to home without a need for oxygen supplementation or pulmonary medications, the long-term impact of interrupted lung development and secondary lung injury remain serious concerns. It is now well recognized that mechanical ventilation is pivotal to developing secondary lung injury and BPD.

Consequently, a great deal of time and effort has been put into the development and application of non-invasive ventilator (NIV) approaches to supporting respiratory function in neonates. Since the landmark publication by Gregory and colleagues in 1967, nasal continuous positive airway pressure (nCPAP) has been the most commonly applied approach to NIV. This approach has been supported by the recent generation of randomized controlled trials. However, cumulatively these trials have shown only a small reduction in rates of BPD. Outside of the trial data, despite the wider application of nCPAP, rates of BPD remain relatively unchanged over recent years. This has led to investigations of other NIV approaches including nasal ventilation and high flow nasal cannula therapy. Not only have available modes increased, but so have the interfaces through which these modes may be applied. In the issue of Clinic in Perinatology, readers will find an up-to-date review of non-invasive approaches to supporting preterm respiratory function. This draws on the expertise of leading investigators in the field. This issue reviews the physiologic mechanisms by which the various approaches to NIV may support respiratory function; the evidence base supporting different NIV approaches; and adjunctive aspects of NIV therapy including their use during neonatal transport and the application of other supportive therapies such as inhaled NO.

From reader reviews:

Tara Thornton:

Reading a guide tends to be new life style with this era globalization. With reading through you can get a lot of information that could give you benefit in your life. With book everyone in this world can share their idea. Books can also inspire a lot of people. A great deal of author can inspire their own reader with their story as well as their experience. Not only situation that share in the guides. But also they write about the knowledge about something that you need example. How to get the good score toefl, or how to teach your kids, there are many kinds of book which exist now. The authors in this world always try to improve their talent in writing, they also doing some investigation before they write with their book. One of them is this Non-Invasive Ventilation, An Issue of Clinics in Perinatology, 1e (The Clinics: Internal Medicine).

Marie Brenneman:

Are you kind of stressful person, only have 10 or maybe 15 minute in your day time to upgrading your mind proficiency or thinking skill possibly analytical thinking? Then you are experiencing problem with the book than can satisfy your limited time to read it because pretty much everything time you only find guide that need more time to be learn. Non-Invasive Ventilation, An Issue of Clinics in Perinatology, 1e (The Clinics: Internal Medicine) can be your answer since it can be read by you who have those short time problems.

Robert Tanaka:

It is possible to spend your free time you just read this book this reserve. This Non-Invasive Ventilation, An Issue of Clinics in Perinatology, 1e (The Clinics: Internal Medicine) is simple to bring you can read it in the recreation area, in the beach, train and soon. If you did not get much space to bring the printed book, you can buy the particular e-book. It is make you quicker to read it. You can save the actual book in your smart phone. Thus there are a lot of benefits that you will get when one buys this book.

Eva Lynch:

Some individuals said that they feel weary when they reading a book. They are directly felt this when they get a half elements of the book. You can choose the actual book Non-Invasive Ventilation, An Issue of Clinics in Perinatology, 1e (The Clinics: Internal Medicine) to make your own reading is interesting. Your personal skill of reading ability is developing when you just like reading. Try to choose basic book to make you enjoy to see it and mingle the impression about book and studying especially. It is to be 1st opinion for you to like to available a book and examine it. Beside that the reserve Non-Invasive Ventilation, An Issue of Clinics in Perinatology, 1e (The Clinics: Internal Medicine) can to be your brand-new friend when you're sense alone and confuse with the information must you're doing of this time.
