Arqueología durante la Transición Pleistoceno-Holoceno en Uruguay (British Archaeological Reports International Series) Rafael Suarez

The main objective of this investigation is to obtain basic data that allow generation of cultural, geoarchaeological, paleoenvironmental and paleoecological knowledge about the Pleistocene-Holocene transition. These will allow discussion of different topics about the peopling of Uruguay within the context of the peopling of America. The book is illustrated with more than 90 photos and linedraw images of artifacts and excavation details.

The book presents a detailed investigation carried out at the Pay Paso locality, which contains a total of nine sites of archaeological, paleontological and paleoecological interest on the plains of the Cuareim River in northwestern Uruguay. The investigation presents a solid chronology that includes 34 ¹⁴C ages determined by four different laboratories, including 32 by AMS. The excavation of Pay Paso 1 allowed stratigraphic, chronological and archaeological definition of the succession of three cultural components, including two dated during the Pleistocene-Holocene transition at 10,930 and 10,500 yr ¹⁴C BP (component 1) and 10,205 and 10,115 years ¹⁴C BP (component 2), and another occupation during the early Holocene dated between 9,585 and 8,570 yr ¹⁴C BP (component 3). Components 2 and 3 present two different projectile point types, indicating more cultural variability during the Pleistocene-Holocene transition and early Holocene in northwestern Uruguay than previously known.

The excavation of Pay Paso 1 allowed recovery of the first records of Pleistocene fauna at an archaeological site in Uruguay. The 186 bones recovered presently make the only faunal collection for an early archaeological site in the country. The contextual, stratigraphic and chronological associations between artifacts and fauna include two extinct mammals of the Pleistocene: *Glyptodon* sp. and *Equus* sp. and three other species of present-day fauna, including: a fish, *Leporinus* sp. (boga), a bird *Rhea americana* (ñandú), and a medium-sized mammal, *Myocastor* (otter). The recovered bones do not present cut marks caused by lithic artifacts. Samples of scute and bone of *Glyptodon* sp. as well as teeth of *Equus* sp. were dated between 9,585 and 9,120 years ¹⁴C BP, which suggests survival of these herbivores until the early Holocene, similar to what occurs approximately 800 km further south in the Pampa of Argentina.

The data obtained from the artifacts from excavation of Pay Paso 1 are compared with those recovered at site K87, where correlations are observed in the use of raw materials, as well as the presence of similar formal artifacts in both sites. The two types of projectile points recovered in components 2 and 3 of Pay Paso 1 are present in stratigraphic contexts of site K87. This investigation defines two new types of early projectile points. The K87 points were dated in three different stratigraphic archaeological contexts with a total of 6 radiocarbon ages during 10,420-9,700 yr ¹⁴C BP.

The study of a collection of Fell 1 or "fishtail points" from Uruguay indicates that the classic definition of the Fell 1 design actually is insufficient to give an account of the morphological variety represented by these artifacts, fundamentally in the stems and blades. Using a mathematical expression I generate a rejuvenation index that allows measurement of the maintenance that had been applied to the Fell 1 points.

Lastly, using the distribution of resources and artifacts in the landscape, I propose a model of the mobility for the early groups in northwestern Uruguay. The movement involves displacements with ranges of distances within 140-170 km from residential sites toward quarry-workshop and provisioning sites of translucent agate.

The recent data permit new implications about the early peopling of southeastern South America within the

general context of the peopling of America.

From reader reviews:

John Enriquez:

Have you spare time for any day? What do you do when you have considerably more or little spare time? That's why, you can choose the suitable activity for spend your time. Any person spent their own spare time to take a move, shopping, or went to the particular Mall. How about open or read a book titled Arqueologia durante la Transicion Pleistoceno-Holoceno en Uruguay (British Archaeological Reports International Series)? Maybe it is to be best activity for you. You know beside you can spend your time along with your favorite's book, you can cleverer than before. Do you agree with its opinion or you have other opinion?

Jonathan Thurman:

Do you have something that you prefer such as book? The reserve lovers usually prefer to select book like comic, short story and the biggest one is novel. Now, why not trying Arqueologia durante la Transicion Pleistoceno-Holoceno en Uruguay (British Archaeological Reports International Series) that give your entertainment preference will be satisfied by simply reading this book. Reading behavior all over the world can be said as the opportunity for people to know world much better then how they react when it comes to the world. It can't be claimed constantly that reading behavior only for the geeky man but for all of you who wants to possibly be success person. So , for all you who want to start looking at as your good habit, you could pick Arqueologia durante la Transicion Pleistoceno-Holoceno en Uruguay (British Archaeological Reports International Series) become your own starter.

Phyllis Thompson:

Your reading sixth sense will not betray an individual, why because this Arqueologia durante la Transicion Pleistoceno-Holoceno en Uruguay (British Archaeological Reports International Series) publication written by well-known writer who really knows well how to make book which might be understand by anyone who have read the book. Written in good manner for you, still dripping wet every ideas and writing skill only for eliminate your personal hunger then you still question Arqueologia durante la Transicion Pleistoceno-Holoceno en Uruguay (British Archaeological Reports International Series) as good book not simply by the cover but also with the content. This is one book that can break don't determine book by its handle, so do you still needing another sixth sense to pick that!? Oh come on your reading through sixth sense already said so why you have to listening to one more sixth sense.

Daniel White:

Do you like reading a e-book? Confuse to looking for your chosen book? Or your book was rare? Why so many issue for the book? But just about any people feel that they enjoy for reading. Some people likes studying, not only science book but novel and Arqueologia durante la Transicion Pleistoceno-Holoceno en Uruguay (British Archaeological Reports International Series) or even others sources were given understanding for you. After you know how the truly great a book, you feel want to read more and more.

Science book was created for teacher or perhaps students especially. Those guides are helping them to bring their knowledge. In various other case, beside science guide, any other book likes Arqueologia durante la Transicion Pleistoceno-Holoceno en Uruguay (British Archaeological Reports International Series) to make your spare time far more colorful. Many types of book like here.
