Evolution's Chimera: Bats and the Marvel of Evolutionary Adaptation David Jacobs

In Greek mythology, the chimera was a hybrid monster made up of the parts of different animals. Bats look like they have the body of a mouse, the face of a gargoyle or fox, and the wings of a pterosaur, giving rise to this book's title. *Evolution's Chimera* describes the amazing physical and behavioral adaptations of bats, using them to illustrate the processes of natural evolution. Bats comprise a quarter of all mammals in the world and are the only mammals that can fly. They occupy every landmass and almost every habitat on Earth, except for the Antarctic, and make up the second-most diverse group of mammals on the planet, numbering more than 1,270 species. They are therefore ideal for the study of how evolution generates the diversity that is the most outstanding characteristic of life.
