Non-Destructive Techniques for the Evaluation of Structures and Infrastructure (Structures and Infrastructures)

Non-Destructive Techniques for the Evaluation of Structures and Infrastructure (Structures and Infrastructures)

This book provides an overview and up-to-date synthesis of the most commonly used non-destructive technologies for the reverse engineering of built infrastructure facilities. These technologies tackle both the geometric and radiometric characterization of built structures, and thus, validated technologies such as laser scanning, photogrammetry, and multispectral remote sensing are presented in depth, from their fundamentals to their application to management systems for diverse applications in civil engineering (damage inspection, structural calculations, road inventory and inspections, BIM, etc.). Alternative methods are therefore presented for routine sub-surface inspections by using non-invasive geophysics (e.g. magnetic, electrical and electromagnetic), as well as thermography for the nearest sub-surface.

The book is divided into three sections, whose main features are as follows:

- Section 1: Fundamentals, principles and applications of: laser scanning, photogrammetry, geophysics, ground penetrating radar, IR thermography, multispectral imaging.
- Section 2: Applications to the inspection of infrastructure facilities: tunnels, breakwaters, railways, roads, and modeling of existing buildings (damage inspection in constructions, thermographic 3D modeling, structural modeling of industrial constructions).
- Section 3: new management tools and intelligent modeling: infrastructure management systems based on non-destructive technologies for masonry arch bridges, computational approaches for GPR processing and interpretation, automatic processing and object recognition from laser scanning data, BIM for existing buildings.

This cutting-edge edited volume will be a valuable resource for students, researchers and professional engineers with an interest in non-destructive technologies and their applications to reverse engineering of structures and infrastructure.

From reader reviews:

Bessie Morris:

With other case, little people like to read book Non-Destructive Techniques for the Evaluation of Structures and Infrastructure (Structures and Infrastructures). You can choose the best book if you'd prefer reading a book. So long as we know about how is important some sort of book Non-Destructive Techniques for the Evaluation of Structures and Infrastructure (Structures and Infrastructures). You can add knowledge and of course you can around the world by just a book. Absolutely right, simply because from book you can recognize everything! From your country till foreign or abroad you can be known. About simple matter until wonderful thing you may know that. In this era, we could open a book as well as searching by internet system. It is called e-book. You can use it when you feel weary to go to the library. Let's study.

Christina Mundell:

The book Non-Destructive Techniques for the Evaluation of Structures and Infrastructure (Structures and Infrastructures) can give more knowledge and also the precise product information about everything you want. Why then must we leave the good thing like a book Non-Destructive Techniques for the Evaluation of Structures and Infrastructure (Structures and Infrastructures)? Some of you have a different opinion about book. But one aim that will book can give many facts for us. It is absolutely right. Right now, try to closer with your book. Knowledge or data that you take for that, you may give for each other; you are able to share all of these. Book Non-Destructive Techniques for the Evaluation of Structures and Infrastructure (Structures and Infrastructures) has simple shape but the truth is know: it has great and large function for you. You can seem the enormous world by open up and read a guide. So it is very wonderful.

Rosemarie Sanders:

Now a day those who Living in the era exactly where everything reachable by connect to the internet and the resources in it can be true or not call for people to be aware of each info they get. How many people to be smart in receiving any information nowadays? Of course the reply is reading a book. Studying a book can help men and women out of this uncertainty Information mainly this Non-Destructive Techniques for the Evaluation of Structures and Infrastructure (Structures and Infrastructures) book since this book offers you rich facts and knowledge. Of course the knowledge in this book hundred percent guarantees there is no doubt in it as you know.

Karen Schanz:

You could spend your free time you just read this book this publication. This Non-Destructive Techniques for the Evaluation of Structures and Infrastructure (Structures and Infrastructures) is simple to deliver you can read it in the park your car, in the beach, train along with soon. If you did not have much space to bring often the printed book, you can buy typically the e-book. It is make you quicker to read it. You can save typically the book in your smart phone. So there are a lot of benefits that you will get when you buy this

book.
